## SIP Trunking

Flexible and reliable SIP services for business

### Frequently Asked Questions

#### *How VoIP / SIP Works*

VoIP services convert your voice into a digital signal that travels over the Internet. If you are calling a regular phone number, the signal is converted to a regular telephone signal before it reaches the destination. VoIP can allow you to make a call directly from a computer, a special VoIP phone, or a traditional phone connected to a special adapter.

#### *What Kind of Equipment Do I Need?*

**A broadband (high speed Internet) connection is required.** This can be through a cable modem, or high speed services such as DSL or a local area network. **An adaptor or specialized phone is required.** VoIP services work over a special VoIP phone or a traditional phone system connected to a VoIP adapter(s). Special VoIP phones plug directly into your broadband connection and operate largely like a traditional telephone. If you use a telephone with a VoIP adapter, you'll be able to dial just as you always have.

#### *Is there a difference between making a Local Call and a Long Distance Call?*

No Contract VoIP allows you to call anywhere in the United States at a flat rate.

#### *If I have VoIP service, who can I call?*

Depending upon your service, you may call anyone in the world or you might be limited only to other subscribers depending on the package you have. If you are calling someone who has a regular analog phone, that person does not need any special equipment to talk to you. Some VoIP packages allow you to speak with more than one person at a time.

#### *What Are Some Advantages of VoIP?*

Some VoIP services offer features and services that are not available with traditional phone lines.

- Lower your phone bill by 50% or more
- Keep your phone number no matter where you go
- Phone numbers from different area codes at your location
- High capacity conference rooms
- Have your phone lines ring in at multiple locations at the same time
- Save on office space by having remote workers
- Flat rate calling and no long distance charges anywhere in the United States
- Quick service activations
- United States based tech support by qualified field technicians
- Lower cost 411 service (business only)
- No Contract VoIP lines are e911 compliant

## What Are Some Disadvantages of VoIP?

If you're considering replacing your traditional telephone service with VoIP, there are some possible differences:

- VoIP services don't work during power outages if you don't have battery backup on your equipment
- 411 for business only and not residential.
- Lines are not compatible with alarm, fax and credit card terminals

## Can I use my Computer While I talk on the Phone?

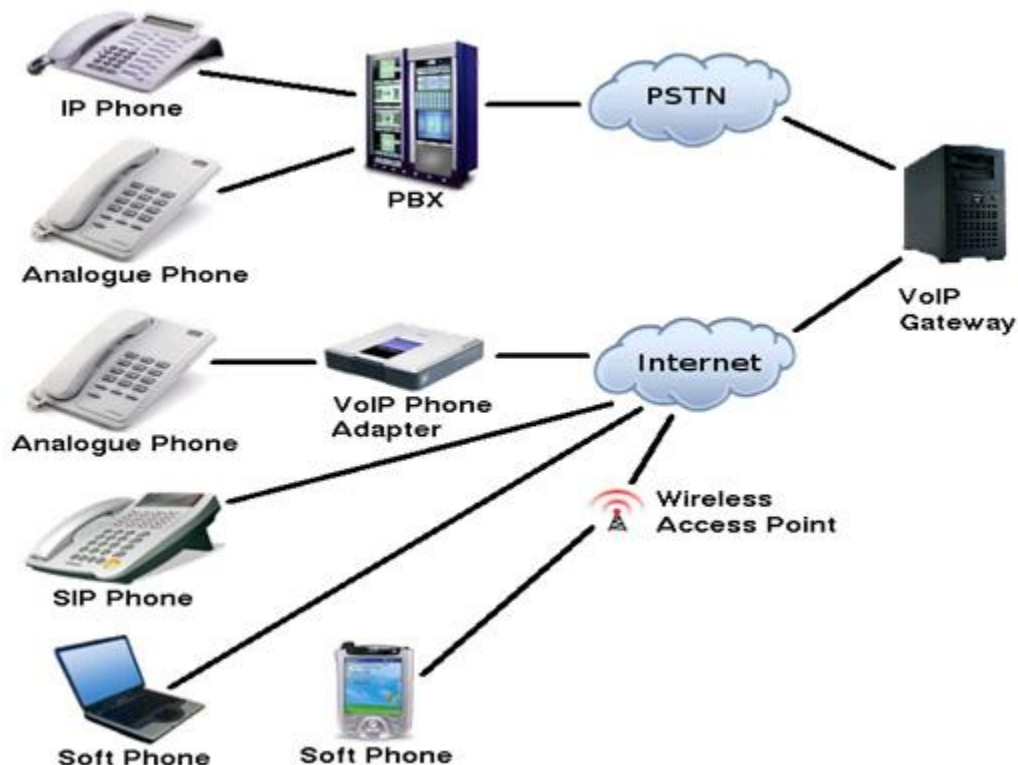

Yes.

## Does my Computer Have to be Turned on?

Only if you're using a Soft Phone that makes calls using your computer.

## How Do I Know If I have a VoIP phone Call?

If you have a special VoIP phone or a regular telephone connected to a VoIP adapter, the phone will ring like a traditional telephone.
